DETAILED ACTION

Claim Objections

1. Claims 2, 4, 7, 8 and 9 are objected to because of the following informalities:

The word "a" before "predetermined target voltage level" (claim 2, line 5) should be "the".

Claims 2 and 4 recite the limitation "the power supply voltage" in line 8 and lines 3-4, respectively. There is insufficient antecedent basis for this limitation in the claims.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Hikada et al..

Hikada et al. discloses an internal voltage generating circuit having all the elements as recited in claims 1-4 and 10 as follows:

a comparing means (71, Fig. 4) for comparing a voltage level of an internal voltage (30, Fig. 4) with that of a reference voltage (VREF, Fig. 4);

a pull-up driving means (Tr3, Fig. 4) for performing a pull-up operation for an output terminal (30) in response to an output signal of the comparing means;
a discharging means (Tr1 and Tr2) for discharging the output terminal in a period (t1, Fig. 3 and column 11, lines 34-39) of which the voltage level of the internal voltage is higher than a predetermined target voltage level ($V_{ss'}$);
a first discharge unit (Tr1);
a second discharge unit (Tr2).

Allowable Subject Matter

4. Claims 5-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art does not teach or suggest the following:

wherein the first discharging means includes a plurality of active loads connected between the output terminal and a ground voltage in series.

a voltage divider for producing a discharge control signal by dividing the power supply voltage; and

a discharge driver for performing a discharge operation of the output terminal in response to the discharge control signal.

Art Unit: 2827

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Atsumi discloses an internal power supply circuit for use in a semiconductor device.
